

MindPoint Group Security Operations Center

Is it time for a Managed SOC Solution?

Invisible threats never take a day off – and neither does our approach to cybersecurity. In today's world, monitoring your system is no longer optional. Cyber risk is everywhere, and that's why MindPoint Group Security Operations Center (**MPGSOC**) applies cybersecurity measures at every level to identify and prevent or defeat invisible threats before they can advance.

Features

Skilled Team – MPGSOC attracts, trains, and equips a skilled team whose mission is to protect you and improve your security.

Quick Onboarding Process – MPGSOC can onboard a new client in less than a month. We can move as fast, or as slow, as you are comfortable with. Our onboarding process gives us the opportunity for you to get to know us and for us to get to know you. We have designed this process to cover everything MPGSOC will need to help protect, defend, analyze, and help your business maintain compliance.

Customer Support – At MPGSOC we take customer service very seriously. In addition to our highly skilled team, MPGSOC has a certified customer success manager dedicated to making your experience as smooth as possible. This level of one-on-one support makes all the difference in those critical cyber-threat moments where every second counts.

Dedicated Email and Shared Folders – We take security very seriously. With MPGSOC, your company will have access to our team through multiple communication methods. Once you begin the onboarding process, a shared folder will be created to save your data in a secure location. You will also receive a dedicated email address that you can use to reach out to the team whenever you need to.

SIEM-Based Log Collection – Your data can reside anywhere – and stay there. The system, application, and user logs are collected and automatically analyzed for signs of an attack.

Incident Response – In the event a breach is detected, effective processes, procedures, roles/responsibilities, and communication plans exist to manage the response effort and shorten the time to recovery.

Critical Benefits

Continuous Coverage – MPGSOC operates at 24x7x365 coverage.

Compliance – Executive Order 14028. Memorandum 21-31. Zero Trust Architecture. IT security risks are a large concern, and meeting minimum requirements is no longer an option. MPGSOC is up to date on all of the above regulations and will help navigate your company to compliance.

Endpoint Security – There is no environment so big that we cannot protect it. MPGSOC will help reduce your company's risk, and control costs, as you operate in the cloud.

Data Protection – MPGSOC will use powerful monitoring tools to keep your network safe and uncompromised. When MPGSOC detects a threat, our Detection Team will work with your team to execute your customized incident response plan.

Network Monitoring and Defense – Let us help stop threats to your network before they even take hold. MPGSOC will monitor your organization for threats and will help defend the confidentiality, availability, and integrity of your critical systems and data.

Threat Detection – MPGSOC will help eliminate security blind spots and accelerate innovation, transformation, and growth within your cybersecurity policies.

As your business becomes digitized, it also becomes more vulnerable than ever before to sophisticated and covert cyber threats. Cyber threats are complex and becoming more advanced and pervasive, creating a need for advanced cybersecurity protection that your company may not be staffed for. **MPGSOC** is equipped with leading industry subject matter experts, engineering support, cutting-edge technology, and dedicated customer support to help keep you informed and to protect your most valuable assets, your networks!

Why MPGSOC's managed SOC services

- We have world-class subject matter expertise within the cybersecurity industry.
- MPG developed and continues to maintain SOC services for the Dept of Justice and other agencies.
- We deliver proven cybersecurity expertise, knowledge and certifications.

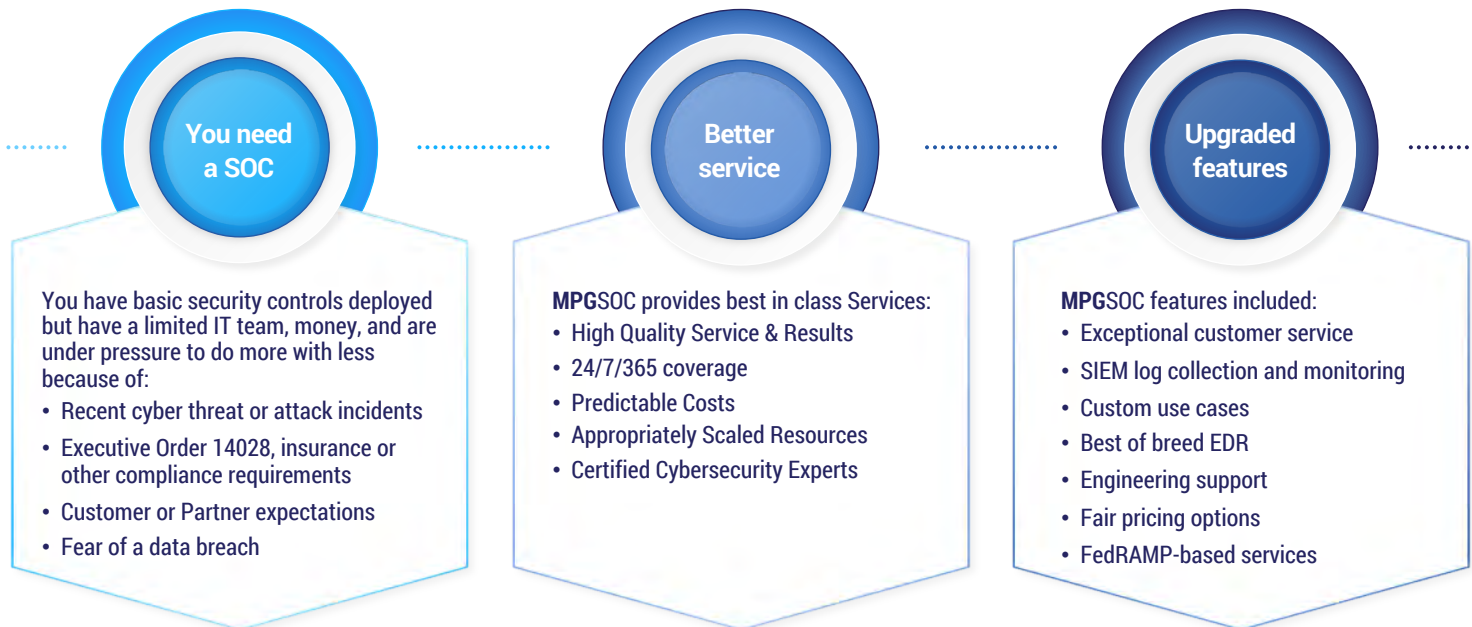

What is a SOC?

A SOC is centralized function within an organization employing people, processes, and technology to continuously monitor and improve an organization's security posture while preventing, detecting, analyzing, and responding to cybersecurity incidents. Simply put, a SOC is *essential* to protecting your organization from advanced, persistent threats.

Why hire MPGSOC?

MPGSOC takes a proactive approach using endpoint detection and security information and event management (SIEM) to prevent, detect, and respond to any potential cyberattacks. Whether you're a global organization with thousands of endpoints or a small growing business that needs to invest in your future protection, **MPGSOC** will scale the right mix of managed solutions to suit your security requirements and business needs.

When do you need MPGSOC?
